Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance of claims 1-11, 13 and 15-41.

For independent claim 1, the prior art of record does not disclose or clearly suggest a carpenter's square comprising a blade, a snap locking angle adjustment device including a first contact element having a first alignment structure that rotates rigidly with the blade, a second contacting element, a spring that presses the first alignment structure axially against the complementary first alignment structure, and each of the contacting elements is a single unit formed by a moulding technique in combination with the remaining limitations of the claim.

Claims 2-6 and 15-25 are allowed due to their dependency on allowed claim 1.

For independent claim 7, the prior art of record does not disclose or clearly suggest a snap locking angle adjustable device comprising a first pivot member and a second pivot member, a third contacting element having a third alignment structure that rotates rigidly with the first pivot member, a fourth contacting element having a complementary third alignment structure that rotates rigidly with the second pivot member, the third alignment structure and the complementary third alignment structure align at certain angles between the pivot members, at which the spring force is reduced compared to at angles where they do not align.

Claims 8-11 are allowed due to their dependency on allowed claim 7.

For independent claim 13, the prior art of record does not disclose or clearly suggest a carpenter's square comprising a blade, a snap locking angle adjustment device including a first contact element having a first alignment structure that rotates rigidly with the blade, the first contacting element being positioned between the blade and the handle, a second contacting element, a spring that presses the first alignment structure axially against the complementary first

alignment structure, and each of the contacting element is a single unit formed by a moulding technique in combination with the remaining limitations of the claim.

For independent claim 26, the prior art of record does not disclose or clearly suggest a carpenter's square comprising a blade, a snap locking angle adjustment device including a first molded contact element having a first alignment structure that rotates rigidly with the blade, a second molded contacting element and a spring to bias the first alignment structure axially against the complementary first alignment structure in combination with the remaining limitations of the claim.

Claims 27-37 are allowed due to their dependency on allowed claim 26.

For independent claim 38, the prior art of record does not disclose or clearly suggest a carpenter's square comprising a blade, a snap locking angle adjustment device including a first contact element having a first alignment structure that rotates rigidly with the blade, and a spring positioned between the blade and the handle, the spring pressing the first alignment structure axially against the complementary first alignment structure in combination with the remaining limitations of the claim.

Claims 39-41 are allowed due to their dependency on allowed claim 38.
